

AIRLINK®

Deposition Aid - Drift Reduction Agent

AirLink is an application management tool that improves deposition and helps to reduce drift of the active ingredient in the spray solution away from the target surface.

- Reduces the production of fine droplets which are susceptible to movement from the spray pattern and improves spreading throughout the canopy.
- Formulated to reduce drift hazard without the use of polymers or lecithin.
- Does not produce large spray droplets like some polymer drift products. Internal cohesion of the components helps to prevent droplets from shearing into fines which move off target.

USE RATES

Aerial and Ground Spraying

Herbicides and fungicides

Insecticides

Do not exceed 1% v/v of the spray solution.

Suggested Rates Per Acre

4 to 6 ounces of AirLink

2 to 4 ounces of AirLink

Always follow the directions on the most restrictive active ingredient label of the tank mix.

NOT FOR AQUATIC USE

NOTE: When combining new or unfamiliar components in any tank mix, the applicator should conduct phytotoxicity and jar tests to assure compatibility and avoid damage to non-targeted species.

Tech Matrix

| | |
|----------------------------|--------------------|
| Functioning agents | 100% |
| Surface tension | 34 @ 0.3125% |
| Density | 7.4 lbs per gallon |
| pH @ 2% with 342 ppm water | 6.2 |
| % Non-volatile | 99.7% |
